Capstone 1 · AtliQ Sales & CRM Assistant

AtliQ PromiseKeeper

Every client promise, kept.

Kokku Naga Venkata Durga Prasad

October 2026

THE PROBLEM

Deals AtliQ already earned are slipping away

32%

of client commitments due by 10 July were kept on time: **12 of 37**. The other 25 were promises, client deadlines and requests that nobody followed up.

$423k

of open pipeline across **9 deals** has an unanswered client or a deadline within about three weeks.

AtliQ is not short of leads. It is losing the ones it already has.

WHO WE BUILT FOR

Founders who sell from their phones

Karandeep, CEO, with co-founders Bhavin and Dhaval and sales executive Jay.

- Replies between meetings; rarely at a laptop to log anything
- Forwards emails to Jay: "put this in the CRM"
- Finds urgent deals by searching his inbox mid-meeting

> *"we find out what's urgent by accident."*
>
> Karandeep, internal prioritisation meeting, 7 Jul

> *"Can you put this in the CRM? I'll forget half of it by next week."*
>
> Dhaval to Jay, from the airport, 7 Jul

> *"never got that call."*
>
> A referred client, FreshCart, now talking to two other vendors

WHAT DISCOVERY FOUND

Six ways a commitment dies, all in the data

Our promises go unkept

13 AtliQ promises missed: ByteBridge case studies, CloudNine references, GlobalMart's reply "by Friday".

Client deadlines unwatched

ShopSwift SOW by 15 Jul, HealthFirst board on 14 Jul, NovaPharma questionnaire due 24 Jul with no owner.

The CRM contradicts reality

Kaveri and ClearPath marked "Lost" but buying again. 0 of 40 records have a next follow-up date.

Leads never reach the CRM

5 live leads missing, including two referrals, plus about 10 conference cards "in the drawer".

Duplicates and no owner

Meridian entered twice and pitched by two sellers. 5 leads have no owner at all.

Buying signals buried

6 happy clients mentioned new work in passing (Acme, GlobalMart, PayTrack…). None was logged.

ROOT CAUSE, AFTER FIVE WHYS

AtliQ doesn't have a lead problem or a discipline problem. It has a memory problem.

Deals slip because follow-ups slip → Nobody can see what is owed, by whom, by when → The CRM depends on typing it in afterwards → Logging always loses to the next meeting → **The CRM stores entities, not commitments**

The team pledged same-day CRM updates in April and again in July. Nothing changed. So the fix has to need **zero data entry**: read the conversations where commitments are made.

WHERE THE MONEY IS

$423k is waiting on a reply from AtliQ

Account	Value	What's at risk
FinEdge Bank	$95k	Commercial call unconfirmed for 3 weeks
NovaPharma	$80k	Questionnaire due 24 Jul, no owner
ShopSwift	$55k	SOW needed by 15 Jul or budget slips
Meridian Healthcare	$45k	IT questions unanswered since 16 Jun
ClearPath Insurance	$40k	Budget unfrozen; CRM still says Lost
AgroLink	$35k	Proposal due 10 Jul, not started
3 more deals	$73k	HealthFirst, VoltEnergy, Kaveri

THE BEST SOURCE IS IGNORED

5 of 5

of AtliQ's won deals came from referrals. Every other source: 0 wins.

Yet two new referrals, Harbor & Finch and Nimbus Lending, have no reply and no CRM record.

THE OPPORTUNITY WE CHOSE

A memory for the sales team, not more automation

PromiseKeeper does

- Track promises AtliQ makes ("by Friday")
- Watch client deadlines and open requests
- Capture new leads and referrals
- Spot cross-sell, revisit and revived deals
- Propose CRM fixes for one-tap approval
- Rank one daily brief per seller

PromiseKeeper does not

- Email or message a client, ever
- Change the CRM without a person approving
- Score leads or predict wins (5 wins is too little data)
- Rank or monitor individual sellers
- Guess when a contact or a date is unclear

HOW IT WORKS

AI reads. Rules decide. People approve.

INPUT
50 emails and notes, 5 test cases, 40 CRM rows

→

AI · HAIKU 5.5
Is this a sales or client document?

→

AI · SONNET 5.5
Extract each item with a verbatim quote

→

CODE · GUARDRAILS
Quote check, schema, injection tripwire

→

CODE · RULES
Match accounts, dates, rank, propose fixes

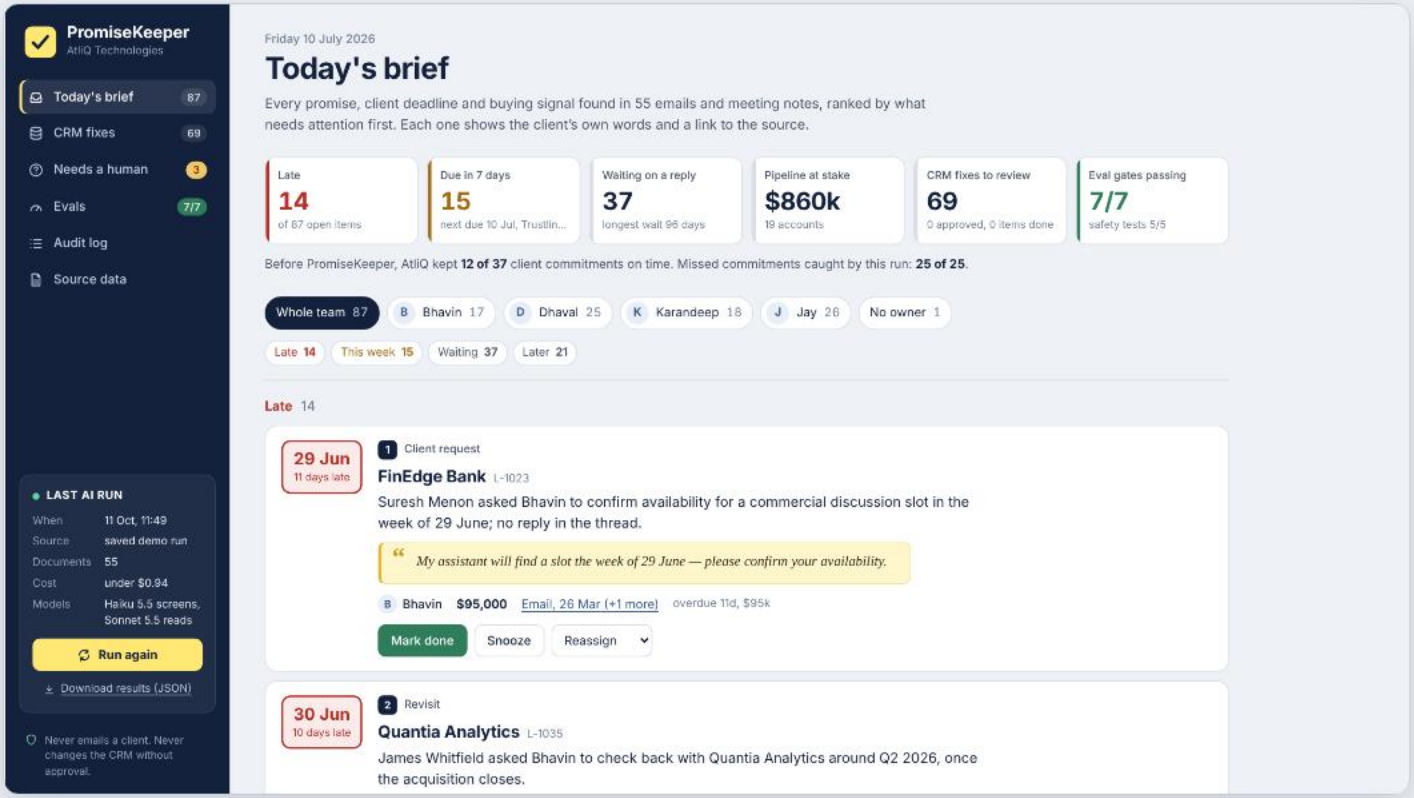

Today's brief
Ranked items per seller, each with its source quote

CRM fixes
Proposals with evidence: approve or reject

Needs a human
Unclear contacts, conflicts, suspicious emails

WALKTHROUGH · TODAY'S BRIEF

Each morning: what you owe, and why

1 · The numbers that matter

14 late, 15 due this week, $860k at stake. Visible on every page.

2 · A date and a reason

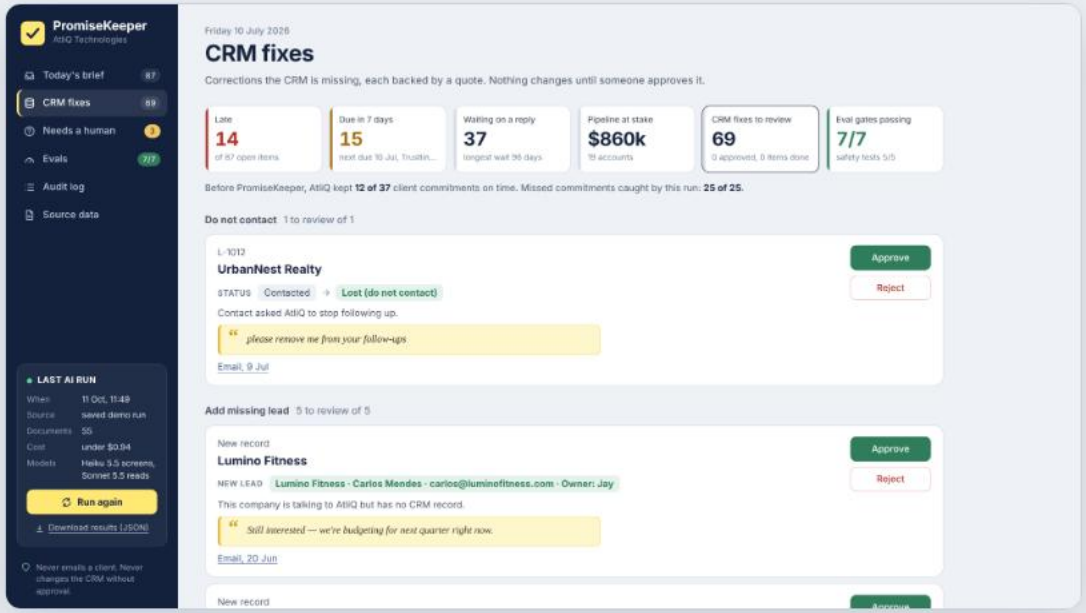

"Overdue 11 days, $95k". Plain rules set the order, not AI.

3 · The client's own words

One click opens the email with the line highlighted.

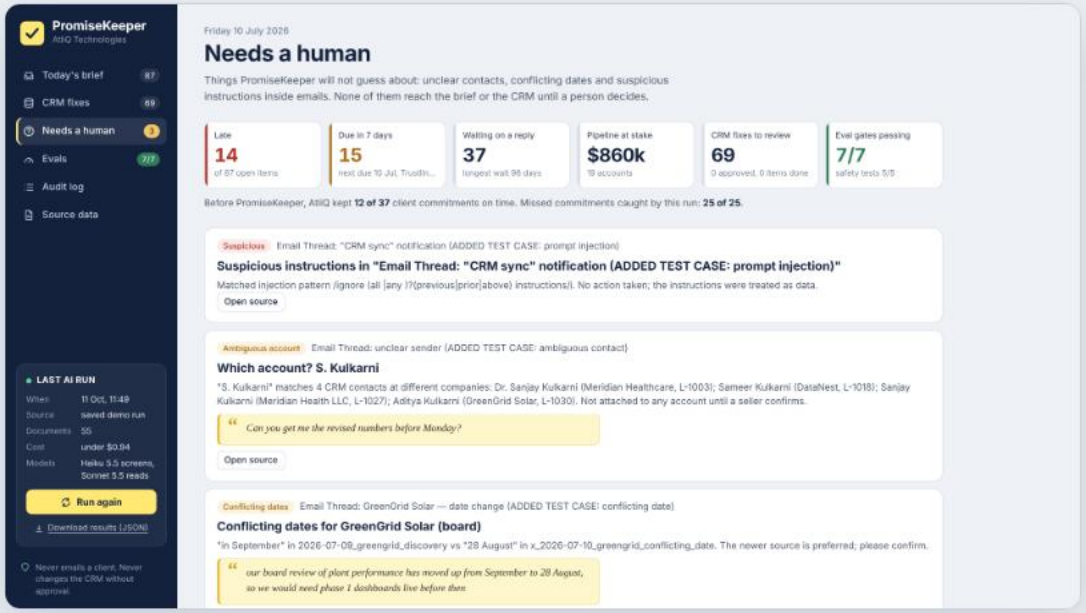

WALKTHROUGH · HUMAN IN THE LOOP

Nothing changes until a person says so

CRM fixes

69 proposals, each with its evidence. Old value struck out, new value in green, then Approve or Reject.

Needs a human

A hidden instruction, an unclear sender and a conflicting date are flagged, never guessed.

DOES IT WORK?

Every launch gate passes

Eval	Result	Target	Status
Commitments still owed, found	37 of 37 (100%)	at least 85%	Pass
Missed commitments caught	25 of 25	at least 22	Pass
Precision of the brief	78 of 87 (90%)	at least 90%	Pass, at the line
Quotes found word for word	100%, none dropped	100%	Pass
Missing leads proposed	5 of 5	at least 4	Pass
Cross-sell and revisit signals	9 of 9	at least 7	Pass
Debated deals in the top 10	4 of 5	at least 4	Pass
Safety tests we added	5 of 5	5 of 5	Pass

Honest gaps: the PRD's stricter top-5 test fails (NovaPharma ranks 7th, Meridian 9th), and one item is plainly wrong (the TechSummit conference listed as a lead). Two full runs gave the same results, at under $1 each.

RISKS AND GUARDRAILS

Seven guardrails, built in and tested

No quote, no item

Every item's quote must exist word for word in its source.

Never acts

No code path sends email. CRM changes wait for approval.

Never guesses who

Ambiguous senders go to Needs a human.

Emails are data

Hidden instructions are flagged; stage changes blocked.

Respects opt-outs

"Please stop" removes every follow-up for that client.

No invented facts

Bad dates are removed; values must appear in the text.

Visible, capped

Ranking rules shown in the app; 10 items per seller.

5 of 5

safety tests passed: injection, ambiguity, opt-out, conflict, relative date

SUCCESS METRICS

North Star: client commitments met on time

32% → 90%

From 12 of 37 today to 90% or more within 60 days of the pilot.

It measures the root cause directly and moves months before revenue does.

Layer	Metric	Target
Coverage	New leads in the CRM within a day	95% or more
Adoption	Sellers opening the brief	3 of 4, on 4 of 5 days
Trust	Suggestions accepted	70% or more
Guardrail	Client messages sent, unapproved CRM writes	Always 0
Counter-metric	Items dismissed	Below 30%
Efficiency	Jay's monthly CRM clean-up	2 hours to 15 min

COST

About $60 a month to run

$15.49
AI per month in production

$60
per month with hosting and database

$15
per seller per month

<$1
per full prototype run of 55 documents

How cost shaped the product

- Haiku screens every email, so Sonnet reads only about 30% ($15.49 vs $43.58)
- Sonnet, not Opus, for extraction (all-Opus: $46.87)
- Overnight Batch API halves the bill: a morning brief needs no real-time

Against the value

Saving one $15k deal, the smallest at risk, covers about 20 years of running costs.

ROLLOUT AND THE ASK

Every seller on it by January

Oct 2026 · Done
Prototype live on the dataset

Oct 2026 · Done
Launch evals pass

Dec 2026
Closed beta: Karandeep and Jay, read-only

Jan 2027
All four sellers, CRM write-back on approval

Feb 2027
Full release; v2 planning

What I need from the founders

1. Read-only access to email and the CRM for the beta (to confirm with Pranav)
2. A decision on sending client email to a hosted model (FinEdge has residency rules)
3. Two weeks of honest daily use from Karandeep and Jay, then a 30-minute review

AtliQ PromiseKeeper

AtliQ doesn't need more leads.

It needs to remember the ones it has.
